Gold Residence, Bel Air, California, United States
Single Family Dwelling / Completed - August 2009

Project description

The client was interested in using sustainable materials to produce an energy efficient structure within a modern context. To achieve that goal we provided a simple open plan completely powered by photovoltaic panels and a domestic solar hot water system. The layout has all the public elements on the ground floor and the second floor houses the bedrooms. The desire for optimal light and breezes prompted the design of a clear story window crowning the second floor circulation. Project Size - 5,543 sq ft
Project Team - Naomi Langer; principal, project team; Nina Lesser -UCLA MArch 1993, Randy Weinstein, Jason Voss
